P R O C E E D I N G S

THE CLERK: Criminal Case No. 120820 State of Maryland versus Brandon Jackson-Green.

MS. MCNEELEY: Good afternoon, Your Honor, Karen McNeely and Sean Andrews on behalf of the State.

THE COURT: All right, good afternoon.

MS. WOOLLEY: Good afternoon, Your Honor, Catherine Woolley on behalf of Mr. Jackson-Green who I saw come up and I'm sure will be present in a moment.

THE COURT: Okay.

MS. WOOLLEY: Your Honor, just for clarity sake in the memorandum I had not filed the attachments but put them in a courtesy copy to the Court. And I just wanted to make sure that the Court had had a chance to review that or to make that note to the Court. I had advised chambers that --

THE COURT: Okay, so what I have is --

MS. WOOLLEY: I filed initially a motion to exclude or restrict.

THE COURT: Yes, and there's a memorandum in support thereof?

MS. WOOLLEY: Yes, did the memorandum come in that had the thick copy?

THE COURT: Yes, thick copy with dividers in the back?

MS. WOOLLEY: That's it. Okay.

1 THE COURT: Okay. And then State's response.

2 MS. MCNEELEY: Correct.

3 THE COURT: Okay, are you ready to proceed?

4 MS. WOOLLEY: Yes.

5 THE COURT: Okay, go ahead.

6 MS. WOOLLEY: Thank you, Your Honor. Your Honor,  
7 this matter comes before the Court on a motion to exclude or  
8 restrict. And I'd actually just like to amend the caption or I  
9 don't need to amend the caption but just let you know that,  
10 that what we are really asking is not to exclude but to  
11 restrict or to limit.

12 THE COURT: Okay.

13 MS. WOOLLEY: And let me just briefly address the two  
14 cases cited by the State. And then speak a little bit to the  
15 substance of this.

16 The Fleming case -- I'm sorry, get my notes out. The  
17 Fleming case doesn't go to the specific issue. What they did  
18 in Fleming and I'll be candid, I think they got a little too  
19 fancy in Fleming. In Fleming they asked for the complete  
20 exclusion of firearm testimony arguing that it was improperly  
21 admitted because the State had used this traditional  
22 comparative microscopic instead of the CMS method.

23 And what the Court of Special Appeals said in that is  
24 you're not entitled to the fanciest and that that would be  
25 essentially cross-examination material. CMS is comparative

1 microscopic matching.

2           What they did say is that the trial Court didn't  
3 error because this was okay, this traditional method was okay.  
4 And we're going to ask the Court to take a closer look at that  
5 because in just addressing whether the defendant was entitled  
6 to the CMS method they did not look at the real limitations  
7 that were outlined in the two reports that we attached for the  
8 State, that Congress directed the National Academy of Sciences  
9 to perform in which as we have laid out, I mean they've got I  
10 don't know 22 Nobel Prize winners on that at the National  
11 Academy of Sciences. This isn't something that is, this is a  
12 Government Report. This is substantive. This isn't an  
13 advocacy on one side or the other. These are the foremost  
14 scientists in the world saying this has severe deficiencies.

15           To the extent that we have both cited Willock, the  
16 State is correct in saying that Judge Grimm found that it was a  
17 complete exclusion was required because someone else had done  
18 this testing. But what they didn't point to was that Judge  
19 Cross specifically and Judge Grimm specifically cited these  
20 reports. And said, "However, in light of National Research  
21 Council's studies that call into question tool mark  
22 identification status as science", end quote, Judge Grimm  
23 concluded that tool mark examiners must be restricted in the  
24 degree of certainty with which they express their opinions.

25           So our bottom line is I couldn't find, and I could

1 search up and down forever, but I know there's not any case  
2 that says firearm tool mark identification is out. It's  
3 excluded. But what they have said in light of these two  
4 reports is that people can't go as far as has been  
5 traditionally, tool mark examiners can't go as far as has been  
6 traditionally accepted. That you can't say to the exclusion of  
7 all other firearms. And that you can't say to a degree of  
8 scientific certainty.

9 Fleming may facially compete with that but had the  
10 Court of Special Appeals been squarely asked to look at these  
11 reports, these findings and not just, and had trial counsel  
12 been arguing these reports as opposed to I think, you know,  
13 getting a little too fancy, that we may have come up with a  
14 different conclusion.

15 Specifically in United States v. Glee, Judge Rachoff  
16 (phonetic sp.) of the Federal District Court said that  
17 ballistics set of germination not only lacks the rigor of  
18 science but suffers greater uncertainty than any other kinds of  
19 forensic evidence. On that basis the Court concluded that to  
20 allow any ballistics examiner to testify that he had matched a  
21 bullet or casing to a particular gun to a reasonable degree of  
22 ballistic certainty would seriously mislead the jury. And held  
23 that ballistics opinions must be stated in terms of more likely  
24 than not but nothing more.

25 So that's what we're asking. We're asking that he

1 can get up, this firearms tool mark examiner. He can talk  
2 about his experience. He can talk about the things he has  
3 done. He can talk about the methods he's used. But there is  
4 no statistical or quantitative measurement by which he can say  
5 it can be this gun, that these bullets and this casings matched  
6 this gun. You can't put a number on it. And you can't say to  
7 the exclusion of all other firearms.

8           As this Court may know through its own experience,  
9 hearing about these cases and whatever familiarity we all have  
10 with firearms, this is the theory that each gun will leave an  
11 individual mark because of the way that a gun is manufactured.  
12 And traditionally and this is guns were hand filed when they  
13 were finished. And that may have in the past led to more of an  
14 individual imprint on the shell casings because the tool mark  
15 happens when the harder surface of the gun comes into contact  
16 with the softer surface of the shell casing as the Court knows.

17           But this is as these reports have pointed out not  
18 something that as time has passed that can no longer, it just  
19 can't be sustained that way. These are credible. They're  
20 credible. They have been cited by Federal cases, by Federal  
21 Courts and our State Courts. And again, what we are asking for  
22 is not a complete exclusion but some reasonable limitation  
23 based on the current state of our understanding of this, what  
24 is even called by the governing body for firearm tool mark  
25 examiners, the ATEM, a theory of identification.

1 THE COURT: Okay. Go ahead.

2 MS. MCNEELEY: Your Honor, as I outlined in the  
3 State's response the issue here is and my understanding of what  
4 the Defense's issue is is what Mr. Esposito (phonetic sp.)  
5 will say in terms of his findings. His findings have been  
6 presented.

7 The issues in these cases in Willock and in Fleming  
8 were how the process took place. And first of all the Fleming  
9 Court address that this is permissible under Frye-Reed. Well,  
10 Frye-Reed is what we use to analyze scientific testimony. So  
11 the Court is saying right there that this is a science and it's  
12 a forensic science that is admissible in terms of testimony  
13 under Frye-Reed. How Mr. Esposito will classify his findings  
14 is to a reasonable degree of scientific certainty.

15 Now if there are issues of any of the, you know,  
16 possibilities of CMS versus microscopic, that's subject to  
17 cross-examination and that is what every Court has stated. His  
18 report was completed. His report was peer reviewed. All of  
19 his identification markings, all of his notations were provided  
20 to the Defense. The only thing that the Courts have said is  
21 that an examiner cannot say 100 percent. And that's not what  
22 he's going to state. What he would state is to a reasonable  
23 degree of scientific certainty.

24 The National Academy of Sciences report also address  
25 things like fingerprints. And the United States v. Glee, is a

1 Federal case where the Court, you know, the Defense attempted  
2 to eliminate the fingerprint because it's not, there's no  
3 scientific comparison. It's somebody looking at two  
4 fingerprints and comparing them. The Court found that that was  
5 not the way to go and ruled in the favor of the Government and  
6 that the fingerprint analysis is permissible.

7           There are cases out of the District of Columbia Court  
8 of Appeals that have recently been decided stating that this  
9 tool marking examination is admissible, that it's admissible as  
10 science. If they want to cross-examine on the alternative  
11 method it's appropriate for cross-examination. But under all  
12 of the case law the testimony is permissible.

13           And as the Fleming Court, the Fleming Court while the  
14 actual trial took place before the 2009 study was conducted or  
15 published, the Court on review had the study and had the entire  
16 criticism of the tool mark examination available to it and  
17 addressed that. And the Fleming Court still say that this is  
18 permissible testimony under Frye-Reed. And the Court went out  
19 of its way to state that by saying even if we didn't find that  
20 this was a harmless error, we would find that this is  
21 permissible testimony under Frye-Reed, therefore, that makes it  
22 a science. And that makes it something that the examiner can  
23 testify to a reasonable degree of scientific certainty as to  
24 his findings.

25           If they want to cross-examine him on his procedure,

1 his findings, then that's subject to cross-examination. But  
2 the issue of limiting his opinion should not be, he should not  
3 be restricted in how he phrases. And he is someone who  
4 testifies throughout the country. He is with, we're not  
5 talking about a State police crime analyst or anything to that  
6 effect. We're talking about someone with the Federal Bureau of  
7 Alcohol, Tobacco, and Firearms and Explosives.

8           So he testifies as an expert across the country. His  
9 testimony has been admissible across the country. And his  
10 statements to a reasonable degree of scientific certainty have  
11 been admissible across the country. And under Fleming and  
12 under Willock and the State of Maryland it should be the same  
13 finding.

14           MS. WOOLLEY: Your Honor, may I just briefly?

15           THE COURT: Okay, go ahead.

16           MS. WOOLLEY: Thank you. Appellant Courts don't  
17 address issues that haven't been raised at the trial court  
18 below. So it is not possible for the Appellant Court to have  
19 reached this specific issue with respect to the specific  
20 reports. Yes, they cited them but they did not look at  
21 specifically the traditional method and the inherent flaws  
22 because they were not argued to the trial court. So Fleming  
23 does not control us to that extent.

24           It is certainly permissible for this Court to say  
25 these reports are now available to me at the trial level. I

1 have reviewed them and I come to the conclusion that this  
2 testimony must be limited as Federal Courts have found it after  
3 these reports have been given at the trial court level.

4           And that's what happened in Masume (phonetic sp.) and  
5 Willock. In Masume and Willock, Bob Bogman (phonetic sp.) and  
6 I can't remember the other attorney. They started off as a  
7 death penalty cases. And these reports were presented to the  
8 trial court. And the trial court was able to review and say  
9 based on my review of these reports these are my findings.

10           And that is exactly what Judge Grimm did. He said  
11 based on my review, one, these reports are important. They are  
12 controlling. They are at the direction of Congress. And they  
13 are from our foremost academy. And the only reason that it  
14 ended up as a complete exclusion I will grant the State is  
15 because this particular examiner who is going to testify hadn't  
16 done the actual test.

17           But even if you backed that out there still would  
18 have been substantial limitations. And to say that once when  
19 these reports specifically say you can't say to a degree of  
20 scientific certainty because there's no way to quantify what is  
21 inherent, what is based on solely the firearm tool mark  
22 examiner's personal experience. All he can say is I've looked  
23 at this gun and I've looked at this many hundreds or thousands  
24 of guns before it.

25           How do you quantify that? What statistic do you use?

1 What metric do you use? And so to say that to a jury and to  
2 say it to a reasonable degree of scientific certainty is just  
3 not where we are. They're essentially counting lines on shell  
4 casings and bullets.

5 And I cannot stand here and say just toss it all out  
6 because that's not what any court has said and I don't have a  
7 good faith basis for that. But what this Court can say is that  
8 he can testify based on his experience. He can testify based  
9 on his training. But that you are not going to permit him to  
10 quantify when there is no quantification. Or to say to the  
11 exclusion of any other firearm in the world.

12 THE COURT: Okay, so when you say quantify you mean  
13 using the expression to a reasonable degree of scientific  
14 certainly? Or do you mean that, I mean my experience with this  
15 in the past has been similar to fingerprints where a firearm  
16 examiner will do the side-by-side microscope. And then it  
17 really depends upon the uniqueness of the marks and the number  
18 of marks and really the uniqueness of the marks that allows  
19 them to either draw the conclusion or not.

20 And I don't know if it used to be that the examiner  
21 would come in and say well there's insufficient detail to give  
22 a unique identification. But I can say that it's consistent  
23 with having been fired with this kind of a gun because there is  
24 11, you know, 7 twist to the right or there's 6 twist to the  
25 left, but not enough uniqueness to say it came from the gun.

1           Or they can come in and say here's what I looked at.  
2           And they would show photographs of what they looked at. And  
3           they would talk about the striations and the lands and grooves  
4           and the marks and the this and the that. And when you slide  
5           them side-by-side, he could describe what you would typically  
6           see, what makes this unique, blah, blah, blah, how the firing  
7           of guns changes the barrel after every shot, and that's what  
8           would makes it unique.

9           And that really was, it was sort of a factual  
10          question that the jury would have to decide about are these  
11          things really unique enough to be able to say that it had to  
12          have been fired from this gun or was it not.

13          So are you talking about limiting the expert from  
14          saying this bullet was fired from this gun? Is that what you  
15          wanted the restriction to be?

16          MS. WOOLLEY: No, well let me perhaps phrase it  
17          differently just so I make sure I'm answering the Court  
18          correctly.

19          THE COURT: Yes.

20          MS. WOOLLEY: What the Court was first describing was  
21          in this latter part was a factual determination for the jury.  
22          You can show the jury the pictures. This is what I saw. This  
23          is what I saw.

24          THE COURT: Yes.

25          MS. WOOLLEY: That's going to come in. I mean --

1 THE COURT: Right.

2 MS. WOOLLEY: And in that sort of factual  
3 determination for the jury is I think is not what we're asking  
4 to limit. And the first part of the Court's I think comment  
5 was in its experience was the microscopic examination.

6 THE COURT: Yes.

7 MS. WOOLLEY: And how these are test fired and then  
8 examined. Again, I've no problem, well I wish I had a problem.

9 THE COURT: Yes.

10 MS. WOOLLEY: But that is not something we're seeking  
11 to limit. What we are seeking to limit is the one step  
12 further, Your Honor, at this point which is I can say it's a  
13 degree of scientific certainty. And I understand what Fleming  
14 says. But when you look at, and this was not argued to the  
15 trial court, but when you look at the ballistics imaging report  
16 which is by the National Academy of Science --

17 THE COURT: Yes.

18 MS. WOOLLEY: -- there is subjectivity inherent in  
19 the analysis. And, you know, these reports are in total over  
20 1,000 pages. So I don't want to, but what the ballistics  
21 imaging, I'm sorry, the firearms identification said is  
22 branches of forensic science slight to a market evaluation are  
23 increasingly concerned with how their fields fit into either  
24 standard under Frye-Reed. Cognizant that the precedent of a  
25 single ruling of inadmissibility could jeopardize future

1 proceedings.

2           So what they are talking about and it is the  
3 subjective determination based on intuition and experience.  
4 That's what it is. And so he can talk about his experience.  
5 And he can talk about his intuition. But it is inherently  
6 subjective. And subjective isn't science.

7           THE COURT: Yes.

8           MS. WOOLLEY: So based on the fact that these cases  
9 have been or these reports have been raised at the trial level,  
10 the Court can certainly look at these and come to a slightly  
11 different conclusion than what is facially apparent in Fleming.

12           Again, we are not arguing that Mr. Jackson-Green was  
13 entitled to a more advanced procedure that I think is  
14 appropriate ground for cross-examination. Why didn't you do  
15 this? Why didn't you do this? Isn't that available to you?

16           But what we are saying are the inherent flaws and  
17 they have now been identified by these reports shouldn't be,  
18 that you shouldn't be saying to a jury that they're quantified.  
19 And certainly again, you know, in Willock that was their  
20 conclusion that based on these reports, which were argued at  
21 the trial level which were subject to motions hearings which  
22 were extremely lengthy given there was a death penalty case.

23           THE COURT: Yes.

24           MS. WOOLLEY: They said, however, in light of, just  
25 to recap, however, in light of the recent National Research

1 Council's studies that call into question tool mark  
2 identifications stats of science, we conclude that the tool  
3 mark examiners must be restricted in the degree of certainty.  
4 And they are talking about a more likely than not.

5 THE COURT: Okay. Let me ask this. In our case --

6 MS. WOOLLEY: Sure.

7 THE COURT: -- was it the projectile that was the  
8 subject of the comparison or was it the shell casing?

9 MS. WOOLLEY: Both.

10 THE COURT: Or was it both?

11 MS. WOOLLEY: It was both.

12 THE COURT: Okay.

13 MS. WOOLLEY: There are bullets and there are shell  
14 casings recovered. It is from a 9mm Sig. And there are five  
15 shell casings and bullets recovered.

16 THE COURT: Okay, alright well let's do this.

17 MS. MCNEELEY: Your Honor?

18 THE COURT: Yes.

19 MS. MCNEELEY: I just want to point out the study  
20 goes into all of these various different sciences. And it  
21 basically says DNA is the only science that that study would  
22 acknowledge because it's the only one that has all of the  
23 numbers that can correlate. So to rely on that study alone  
24 would be to say there's no other science out there other than  
25 DNA. And that's exactly what Fleming is saying is not true.

1 And Fleming is saying, you know, this is subject to Frye-Reed.  
2 It's admissible under Frye-Reed. That implies right there that  
3 it's a science.

4           The conclusions, the AFTE, the governing body for  
5 tool mark examiners, they publish, you know, the range of  
6 conclusions that they can do are identification, inconclusive,  
7 or elimination. And they also, you know, you can see their  
8 firearms false-positives are 1.9 percent, false-negatives, 0.4  
9 percent. I mean it is about as good as you can get. And Mr.  
10 Esposito's report does make his findings extremely clear. And  
11 all of the photographs were provided. So I just wanted to  
12 point that out.

13           And the idea of saying a reasonable degree of  
14 scientific certainty, that provides the leeway in  
15 cross-examination. And that provides the limitation. But it  
16 is to a degree of scientific certainty because this is a  
17 science.

18           THE COURT: Okay. Alright, well let me just take a  
19 brief recess here, look at a couple of things again after  
20 having heard argument. So why don't you come back in about a  
21 half an hour. Alright.

22           Are you going to keep him up here or take him  
23 downstairs?

24           THE SHERIFF: We'll just keep him up here.

25           THE COURT: Okay, alright, so we'll recess.

1 THE CLERK: All rise.

2 The Court's in recess.

3 (Recess)

4 THE CLERK: All rise.

5 JUDGE'S RULING

6 THE COURT: Alright, thank you. Please be seated.

7 Okay, so we're back on the record now in Brandon  
8 Jackson-Green. And the counsel for both parties are present  
9 and the defendant himself is present in court.

10 So I've looked again at some of the information  
11 that's been presented and the arguments that have been  
12 presented on the defendant's motion to limit the manner in  
13 which State's tool mark identification expert would testify in  
14 court.

15 I guess just to start with I think that when you look  
16 at the National Academy reports or articles they seem to sort  
17 of be zeroing in on, well first of all they don't deal with  
18 obviously the admissibility of evidence. They seem to be  
19 zeroing in on the idea of a test as opposed to scientific  
20 evidence. Because they start talking about this new procedure  
21 of CMS which has not yet been generally accepted in the  
22 community. And they're trying to relate statistical data to  
23 marks that are seen on a case to come up with an automatic  
24 answer. That if there's a certain statistical correlation  
25 amongst these stria that are found, therefore it equals a

1 match.

2           That is different than what tool mark examiners do  
3 which is observe. They understand the science of metallurgy  
4 and tool marks. And based upon their training and experience  
5 they form an opinion about whether or not tool marks made on a  
6 particular shell casing or projectile are similar enough to the  
7 tool marks made on a shell casing or projectile fired at a test  
8 firing that the tool mark examiner can make a comparison and  
9 can say in my opinion they were fired from the same gun.

10           So there's a science behind that similar to  
11 fingerprinting where someone came up with a theory that because  
12 of the uniqueness of the characteristics on a person's  
13 fingerprint, that no two could be the same. Well that was a  
14 mathematical theory. And then over time as data began to  
15 become collected and they began to understand it it became to  
16 be accepted and eventually it was found to be scientifically  
17 reliable. And it became admissible in courts.

18           The same thing happened with tool mark identification  
19 where the theory in metallurgy science is that manufacturing  
20 processes cause unique marks on items and including the inside  
21 of a barrel. And, therefore, when a bullet is fired through  
22 that barrel that unique marks will be made on it.

23           Another aspect of metallurgy is that because the  
24 metal is soft every time a fire occurs that those individual  
25 characteristics change overtime. And that's the theory behind

1 the fact that they're all dissimilar. Overtime as they compare  
2 more and more and they do more comparisons they find that to be  
3 true. And so, therefore, it becomes accepted in courts under  
4 Frye-Reed analysis that it's generally accepted in the  
5 scientific community.

6 So I think there's a difference between a test like  
7 DNA and scientific evidence, which can be in the form of an  
8 opinion from an expert based upon training and experience.

9 Well I guess the other aspect of this is that clearly  
10 tool mark identification in terms of firearms identification  
11 has been accepted by this Court and courts around the country  
12 for a long time, having passed the Frye-Reed analysis. There's  
13 nothing in the reports that I've read that seems to undermine  
14 that. It really talks about a new procedure that someone  
15 believes might be more accurate or more reliable. But that's  
16 not even generally accepted in the scientific community because  
17 it's so new. It's only been around since the late 1990s and it  
18 hasn't really been used prolifically throughout the industry or  
19 adopted by the industry.

20 So the fact that there may be a second procedure that  
21 might be equally or more reliable doesn't mean that this  
22 procedure is not reliable. And there's been no case that I'm  
23 aware of that has ruled from an Appellant level that this type  
24 of tool mark identification does not meet the reliability  
25 standard necessary for admissibility in court.

1 I think that the reports even acknowledge that there  
2 are circumstances under which there would be sufficient tool  
3 marks that an expert could say, yes, this bullet came from that  
4 gun. They also seem to say that there are many cases where  
5 there may not be. And that seems to be the problem that the  
6 National Academy report has with tool mark identification. The  
7 fact that in every single case you can't come up with an  
8 answer. Well, that's sort of the nature of expert testimony.

9 In those cases where there's insufficient either  
10 class characteristics or individual characteristics then there  
11 won't be identification. But in those cases where there are,  
12 then they will form the opinion and they'll express that  
13 opinion.

14 So to say that it's not a test doesn't mean it's not  
15 scientific. I think clearly tool mark identification is based  
16 on the scientific principles of metallurgy and tool marks. And  
17 that sort of is the definition of scientific evidence.

18 In the cases that I read, I guess it was the Fleming  
19 case. Obviously, they found that it was appropriate for the  
20 examiner to give his opinion. In the other case, I'm not  
21 really sure that was really all that helpful, the Willock case  
22 because in that case the parties had already agreed going in to  
23 the trial that the report was admissible and that the expert  
24 could give identification testimony. And the parties agreed  
25 ahead of time that Esposito should not be permitted to express

1 his opinions with any degree of certainty.

2           The Court just simply adopted that because that was  
3 the parties' agreement. The Court didn't make any finding that  
4 that should be the case. The Court just simply said that the  
5 parties have agreed to these certain things. And the Court  
6 said the Court finds that that's appropriate. So, therefore,  
7 Mr. Hebron's (phonetic sp.) motion was denied.

8           So Willock doesn't really deal with the issue of  
9 whether or not some court has found that the opinion expressed  
10 should be limited. It just simply approved what parties had  
11 already agreed to in that case.

12           So I think based upon the information provided I  
13 don't think that the National Academy reports that have been  
14 provided really detract from the reliability of this particular  
15 procedure, the tool mark identification procedure. And I think  
16 because the opinion of the tool mark identification expert is  
17 based on the science of metallurgy that it would be appropriate  
18 to express it in terms of to a reasonable degree of scientific  
19 certainty.

20           That's the way it's been done as far as I know for a  
21 long time because although the opinion is not a test per se, it  
22 is an opinion based upon principles and techniques of science.  
23 And that's why it would be considered scientific evidence.

24           So at this point then I would deny the motion to  
25 restrict the testimony to simply detailing what he observed.

1 Certainly under Frye-Reed he would be permitted to express an  
2 opinion. And I think that the question for the jury is going  
3 to be to decide whether or not he had sufficient information or  
4 detail to give that opinion, which would be certainly subject  
5 to cross-examination by Defense counsel during this case.

6 But I think like any other medical expert, many  
7 scientific experts, they express their opinions once they have  
8 collected sufficient data. And physicians come to court. They  
9 give diagnosis and prognosis to a reasonable degree of medical  
10 certainty. Is that a test result? No. It's their opinion  
11 based upon medical training. So their diagnosis that it's X or  
12 their prognosis that it's Y or that in their opinion the person  
13 will never work again. That comes out as a reasonable degree  
14 of medical certainty although it's not a test result.

15 So I think this is sort of similar to that. Anyway  
16 I'll deny the motion to restrict the firearms testimony.

17 Okay, go ahead.

18 MS. WOOLLEY: Your Honor, just for the record I don't  
19 read either of these reports as dealing exclusively with CMS.  
20 I believe that they deal with tool marks as evidence. And  
21 specifically the traditional method of tool mark identification  
22 should that become an issue at a future time.

23 THE COURT: No, I agree that what you provided me  
24 does talk about that. But their criticism seems to be that  
25 it's subjective. And that it's not similar to CMS which is

1 attempting to do comparisons by statistical analysis as opposed  
2 to physical observation and training and experience.

3 MS. WOOLLEY: Yes, the traditional method does not do  
4 what CMS is attempting to do.

5 THE COURT: Right.

6 MS. WOOLLEY: And in that regard I would still regard  
7 these two reports as something upon which the Defense could  
8 cross-examine the expert.

9 THE COURT: Okay. Well, I can't rule on that in  
10 advance. I'll just have to wait question-by-question and see  
11 how it goes.

12 MS. WOOLLEY: Do I need to so they become part of the  
13 record move the courtesy copy in? Or should I make copies and  
14 move these in at a subsequent time?

15 THE COURT: It probably would be a good idea to at  
16 least mark them as an exhibit.

17 MS. WOOLLEY: Okay.

18 THE COURT: So it's part of the record so that you  
19 can, so the record will be clear what you submitted.

20 MS. WOOLLEY: Do I need to do it, can I do it  
21 tomorrow morning when I can submit a clean copy?

22 THE COURT: Okay, let's see here. Hold on. Well  
23 what you could do is you could use this.

24 MS. WOOLLEY: Okay.

25 THE COURT: Let me see here. Probably, let's see

1 well do you have a copy that doesn't have all the edits to it?  
2 In other words, the courtesy copy I have is highlighted,  
3 underlined, exclamation point, errors.

4 MS. WOOLLEY: I didn't do that did I?

5 THE COURT: Well no more than three exclamation  
6 points at one time.

7 MS. WOOLLEY: I don't think I gave you anything with  
8 exclamation points on it. No, Your Honor, I don't have a copy  
9 that I've highlighted. I should have anticipated this in  
10 advance. But with the Court's permission --

11 THE COURT: Well, I mean well if no one objects I can  
12 just give them the copy that was provided to me.

13 MS. WOOLLEY: Yes.

14 MS. MCNEELEY: That's fine.

15 MS. WOOLLEY: That's fine.

16 THE COURT: Okay. So why don't we mark this as an  
17 exhibit because that way the record will show the attachments  
18 that were submitted.

19 (The document referred to was marked  
20 as Defendant's Exhibit No. 1 for  
21 identification.)

22 MS. MCNEELEY: Does Your Honor want us to submit voir  
23 dire tomorrow? I don't know we're set to start trial on  
24 Monday. Do you want voir dire and for post jury instructions?

25 THE COURT: Okay, so that would be a good idea.

1 Let's see.

2 MS. MCNEELEY: Assuming we're the only trial on your  
3 calendar.

4 THE COURT: Yes. So that would be a good idea. If  
5 you can exchange it. And then you could either deliver it or  
6 e-mail it. Either way is fine.

7 MS. MCNEELEY: Okay, let's do your law clerk's e-mail

8 MS. WOOLLEY: Are we starting at 9:30 Your Honor or  
9 9:00?

10 THE COURT: We can do either. Do you have a  
11 preference?

12 MS. WOOLLEY: 9:00 but --

13 THE COURT: Okay.

14 THE CLERK: The jurors won't be ready.

15 THE COURT: What's that?

16 THE CLERK: The jurors won't be ready.

17 MS. MCNEELEY: Yes, I had this problem last week and  
18 the jurors aren't ready.

19 THE COURT: That's true.

20 THE CLERK: They have orientation.

21 THE COURT: I think the orientation doesn't end until  
22 like almost like 9:25 or something like that.

23 MS. WOOLLEY: Okay.

24 THE COURT: Okay, so if you all can exchange then  
25 when we get here on Monday then we'll deal with that.

1  
2  
3  
4  
5  
6  
7  
8  
9  
10  
11  
12  
13  
14  
15  
16  
17  
18  
19  
20  
21  
22  
23  
24  
25

MS. WOOLLEY: Okay.

THE COURT: Okay, anything else?

MS. MCNEELEY: Nothing else from the State.

THE COURT: Okay.

MS. WOOLLEY: Thank you, Your Honor.

THE COURT: Alright, take care.

MS. MCNEELEY: Have a good weekend.

MR. ANDREWS: Thank you, Your Honor.

(The proceedings were concluded.)
